TMCE `96 PROCEEDINGS CONTENTS

Members of the Program Committee I

SESSION ONE
LEADING TOPICS OF CONCURRENT ENGINEERING 1

Andrew Kusiak, Nick Larson:
Concurrent Engineering: A Process Reengineering Perspective 3

Tony Medland:
The Application of a Constraint Based Approach to the Design of Machines and Processes 15

Giovanni Moroni, Aristides A. G. Requicha:
Tolerance Modeling and Application Programming Interfaces 28

Harald Meerkamm, Christoph Löffel, Stefan Rösch, Elmar Storath:
An Engineering Workbench as a Basis for a Concurrent Engineering Approach 39

Willem F. Bronsvoort, Rafael Bidarra, Maurice Dohmen, Winfried van Holland, Klaas Jan de Kraker:
Feature Modelling for Concurrent Engineering 46

SESSION TWO
OPTIMUM DESIGN OF PRODUCTS

Sadaji Ohkubo, Kazuhiro Taniwaki:
Structural Optimization Dealing with Shape, Material and Sizing Variables Subjected to Static and Seismic Loads 59

Jürgen Grunwald, Eckart Schnack:
Shape Optimization of Damaged Continua Considering High Cycle Fatigue 75

Katsumi Inoue, Hideaki Fueki, Masana Kato:
A Solution of GA Hardness Based on Regional Characteristic in the Design of Stiffener Layout for a Plate 90

Niels Henrik Mortensen, Mogens Myrup Andreasen:
Designing in an Interplay with a Product Model-Explained by Design Units 100

SESSION THREE

CHALLENGES OF CONCURRENT ENGINEERING 117

Joris S. M. Vergeest:
The Position of CAD Development in Design Research 119

Imre Horváth:
Morphological Transition Problems in Product Modelling 130

Hans Grabowski, Stefan Rude, C. Liu:
Recognition of Engineering Information from Technical Drawings 148

Ryszard Rohatynski:
Concurrent Engineering and Features: New Challenge for Methodology of Engineering Design 157

SESSION FOUR
PRODUCT ENGINEERING ISSUES 177

Stig Ottosson:
The Product Development Matrix and Dynamic Product Development Considerations 179

Joris S. M. Vergeest:
Fundamental Issues of Model Sharing for Concurrent Engineering 188

Oleg Benevolensky, György Krállics:
Finite Element Simulation of Electrical Composite Insulator End Fitting 199

Werner Dankwort, Gerd Podehl:
Industrial CAD/CAM Application and System Architecture - a Closed Loop 206

Csaba Gyenge, Ancau Mircea:
Simulation and Technological Optimization of Pocket Milling Processes 212

SESSION FIVE
RESOURCES OF CONCURRENT ENGINEERING 219

Markus Stamminger:
Efficient and Effective Process Reengineering - A Continuous Methodological Approach 221

Hans Petter Hildre:
Design for Product Variety 232

EvaStina Bjork:
Market Oriented Product Development - Action Research in Design for Ergonomics 243

Peter Sallay:
Intergraph's Next Generation CAD Technology 252

Miroslav Veres, György Bukoveczky, József Fekete:
Concurrent Engineering as Means of Optimization of Creative Processes in the Machines and Consument Goods Design with CATIA Solutions 263

SESSION SIX
PRODUCT OPTIMIZATION APPLICATIONS 271

Anna Vásárhelyi:
Some Questions Concerning The Topological Optimization with Layout Technique 273

Thomas Bar:
Application of a Shape Optimization Tool Based on FEM in the Early Stages of the Design Process 287

Matthew John Hague, A. Taleb Bendiab:
Development of a Software Tool for the Management Evaluation and Optimization of Multiple Conceptual Design Variants 297

Károly Váradi, Zoltán Néder Zoltán Sebesy, Sándor Kiss:
FE Analysis and Optimization of a Two-level Box Type Trailer and its Undercarriage 308

Vu Ngoc Cam :
The Optimization of Bearing Structure for Increased Wear-Resistance 316

SESSION SEVEN
SYNTHESIS TECHNIQUES AND APPLICATIONS 323

Arturo Molina. A. Chemaly:
A Computer Aided Simultaneous Engineering Framework 325

Sándor Vajna, Britta Wegner, Tibor Bercsey:
Evolution Theories and Strategies in Concurrent Engineering 337

Sándor Lőrincz:
Consulting Experiences in Using Concurrent Engineering Techniques 345

Hans Seifert:
Technical Innovation - A Definition Based on the Principles of the Design Conception 354

Béla Mohácsi:
Past, Present and Future of CAD/CAE Technology in the Hungarian Industry 370

SESSION EIGHT
FEATURES IN CONCURRENT ENGINEERING 375

Chrisian Weber:
What Do We Call a "Feature" and What ls Its Use? 377

Attila Csabai, lmre Horváth:
Transitions Among Design, Manufacturing, Analysis and Assembly Features 386

Reiner Anderl, Hans-Jörg Speck:
Development and Documentation of Complex Product Models 402

Matts Carlsson:
State-of-The-Art/Science as a Framework for Development of Conceptual Models and Key Factors in Integrated Product Development 414

Béla Poldermann, Imre Horváth:
Surface Design Based on Parameterized Surface Features 432

SESSION NINE
SHAPE OPTIMIZATION TECHNIQUES 447

Károly Jármai, József Farkas:
Optimum Design of Welded Steel Structures 449

István Elinger, Károly Váradi:
Shape Optimization of Threaded Plastic Caps by FEM Based on Measured Non-linear Material Law 469

György Vancsay:
Shape Optimization Based on Genetic Algorithm 475

Csilla Sellyei, Gabor Körtelyessi:
Sensitivity Analysis for Shape Optimization of 3D Elastic Structure Using BEM 481

Dmitri Malgyn, György Krállics:
FEM Approach to Numerical Investigations of Deep Drawing of Metal Sheets 489

SESSION TEN
SUPPORTING TOOLS OF PRODUCT DEVELOPMENT 501

M. J. Brandish, A. Taleb Bendiab:
VirtualTeam: An Intelligent Computer Supported Concurrent Product Development Framework 503

Peder Andersson:
On Quantitative Modelling for Robust Design of Technical Systems 514

Paul Xirouchakis, Dimitris Kiritsis:
A Generic Petri-Net Model For Disassembly Planning Processes 523

Petra Marx, Jürgen Kopsch, Gisbert Lechner:
An Active Semantic Network for Efficient Solutions in Engineering Design 530

Ulrich Feldhaus:
Electronic Product Definition 542

SESSION ELEVEN
ADDITIONAL TOPICS OF CONCURRENT ENGINEERING 549

László Horváth:
Modeling of Shape, Manufacturing Process and Factory Environment Using Collaborative Methods and Tools 551

Zsolt Dupcsák:
Development and Integration of the DFMA Method 558

Roy Weber. Ulrich Feldhaus:
Solid Modelling of an Engine Block - Practical Aspects of Simultaneous Engineering 564

Mehmet Akyar:
Solid Modelling Systems and Data Exchange 573

János Logó:
Optimal Design of Simple Structures Using the Pareto Optimum 579

SESSION TWELVE

ADDITIONAL TOPICS OF CONCURRENT ENGINEERING 593

Vipul Desai:
3D-Model for Successful MIS Design and Development 595

Ferenc Orbán, Mihály Klincsik:
Engineering Problem Solution with MAPLE 610

György Tóth:
SYSTUS+: New Version of the SYSTUS Finite Element System 618

Scholtz Péter:
Integrated Computer Aided Design in Education 628

Ferenc Takács:
Composic Workshop - Summary from the Subject of the the
Standard Training for Composic Program 635

Authors' Index 651
